Fekete-Szeg*o*^{••} **Coefficient for the Janowski** *A-Q***-Spirallike Functions in Open Unit Disk**

Read. S. A. Qahtan, Hamid Shamsan, S. Latha

Abstract In this paper we look at functions which are Janowski a-q-spirallike associated with the m^{th} root transformation using the concept of the q-derivative introduced by Jackson[6] Specifically we look at functions f which are Janowski a-q-spirallike with power senes of the form $f(z) = z + a_2$ $z^2 + a_3 z^3 +$

Keywords : Convex functions, Janowski a-q-spirallike, Subordination, Hadamard Product, Fekete-Szeg^o Inequality.

I. INTRODUCTION

Let $E = \{z : |z| < 1\}$ be the unit disc in the complex plane, and let $\Omega = \{\omega : \omega \text{ analytic in } E, \omega(0) = 0, |\omega(z)| < 1, z \in E\}.$

$$\partial_q f(z) = \frac{f(z) - f(qz)}{z \ (1 - q)}, \ (z \neq 0, 0 < q < 1, \ \partial_q f(0) = f'(0)).$$
(2)

n=2

Equivalently (2), may be written as

x

$$\partial qf(z) = 1 + X [n]q \text{ an } zn-1, z = 0,$$
 (3)

where
$$[n]_q = \frac{1-q^n}{1-q}$$
, note that as $q \to 1^-$, $[n]_q \to n$

Equivalently (2), may be written as

 ∞

$$\partial qf(z) = 1 + X [n]q \text{ an } zn-1, z \in 0,$$
 (3)

Then

 $\mathcal{P}(A,B) = \left\{ p: p(z) = \frac{1+A\omega(z)}{1+B\omega(z)}, -1 \leq B < A \leq 1, \omega \in \Omega \right\}$. Let A denote the class of functions of the form

$$f(z) = z + \sum_{n=2} a_n z^n$$

n=2 (1) which are analytic in the open disc E normalized by f(0) = 0, f0(0) = 1. In [6] Jackson introduced and studied the concept of the q-derivative operator ∂q as follows

class $S^*_{\alpha}(A, B)$ as the class of functions f such that $\frac{zf'}{f} - i\sin\alpha}{\cos\alpha} \in \mathcal{P}(A, B)$, where α is real and satisfies $|\alpha| < \frac{\pi}{2}$. Now we define the q-analogue of the class as the following:

Definition 1.1. For real α , $(|\alpha| < \frac{\pi}{2})_{a}$ function $f \in A$ given by (1) is said to be

in the class of Janowski α -q-spirallike functions in unit disk if and only if

$$e^{i\alpha} \ \frac{z\partial_q f(z)}{f(z)} = p(z)\cos\alpha + i\sin\alpha, z \in E,$$
(4)

Definition 1.2. If $f \in A$. Then the mth root transform is given by

$$G(z) = [f(z^m)]^{\frac{1}{m}} = z + \sum_{n=1}^{\infty} c_{mn+1} \ z^{mn+1}$$
(5)

II. Main results

We need the following Lemmas to prove our main results:

Lemma 2.1. [2] If $\varphi \in \Omega$ and $\varphi(z) = \varphi 1z + \varphi 2z2 + ..., (z \in E)$ then (6) if $\mu \leq -1$,

$$|\phi_2 - \mu \phi_1^2| \leq \begin{cases} 1, & \text{if } -1 \leq \mu \leq 1, \\ \Box \mu, & \text{if } \mu \geq 1. \end{cases}$$

$$(7)$$

For $\mu < 1$ or $\mu > 1$, the equation holds if and only if, $\varphi(z) = z$ or one of its rotations. For $-1 < \mu < 1$, the equation holds if and only if, $\varphi(z) = z2$ or one of its rotations. Equality holds for $\mu = -1$ if and only if $\phi(z) = (z \frac{\lambda + z}{1 + \lambda z}), (0 \le \lambda \le 1)$ or one of its rotations. While $\mu = 1$, equation holds if and only if $\phi(z)=(-z\tfrac{\lambda+z}{1+\lambda z}), (0\leq_{\!\!\lambda\leq 1)} \text{or one of its rotations.}$

Lemma 2.2. [7] If $\varphi \in \Omega$ then $|\phi_2 - \mu \phi_1^2| \le \max \{1, |\mu|\}$, for any complex number μ . The result is sharp for the function $\varphi(z) = z$ or $\varphi(z) = z2$.

Theorem 2.1.

$$\begin{pmatrix} \frac{z\partial_q f(z)}{f(z)} - 1 \end{pmatrix} \prec \begin{cases} \frac{e^{-i\alpha}(A-B)\cos\alpha z}{1+Bz}, & B \neq 0\\ e^{-i\alpha}A\cos\alpha z, & B = 0 \end{cases}$$

$$f(z) = z + a_2 \ z^2 + a_3 \ z^3 + \dots, f(z) \in S^*_{\alpha}(A, B, q) \text{ if and only if}$$

(8)

Proof. Let f(z) be an element of S^*_{α} (A, B, q). We define $\varphi(z)$ by: $((A-B)\cos\alpha e^{-i\alpha} f(z) = (1 + 1)^{-1} e^{-i\alpha} f(z)$ $B\phi -i\alpha(z)$ _______ B, B 6= 0, (9) z eAcosae, B = 0,

where $(1 + B\phi(z))\frac{(A-B)\cos\alpha e^{-i\alpha}}{B}$ and eAcosa e-ia have the value at z = 0. Then $\phi(z)$ is analytic and $\varphi(0) = 0$. If we take logarithmic derivative from (9) and after simple calculations, we get (10)

We can easily conclude that
$$\begin{pmatrix} z\partial_q f(z) \\ f(z) \end{pmatrix} - 1 \end{pmatrix} = \begin{cases} \frac{(A-B)\cos\alpha e^{-i\alpha}z\partial_q\phi(z)}{1+B\phi(z)}, & B \neq 0\\ A\cos\alpha e^{-i\alpha}z\partial_q\phi(z), & B = 0 \end{cases}$$
 this subordination is equivalent to
$$|\phi(z)| \end{cases}$$

<1 for all $z \in E$. On the contrary let as assume that there exists $z1 \in E$, such that $|\varphi(z)|$ attains its maximum value on the circle |z| = r, that is $|\varphi(z1)| = 1$. Then when the conditions $z1\partial q\varphi(z1) = L(z1)$, L ≥ 1 are satisfied for such $z1 \in E$ (Using Jack's Lemma), we obtain;

(11)

subordination

which contradicts (10) implying that the assumption is wrong, i.e., $|\varphi(z)| \le 1$ for all $z \in E$. This shows that

(12)

Conversely,

$$f(z) \in S^*_{\alpha}(A, B, q) \Rightarrow \left(\frac{z\partial_q f(z)}{f(z)} - 1\right) \prec \begin{cases} \frac{e^{-i\alpha}(A-B)\cos\alpha z}{1+Bz}, & B \neq 0\\ e^{-i\alpha}A\cos\alpha z, & B = 0 \end{cases}$$

$$(13) \qquad \left(\frac{z\partial_q f(z)}{f(z)} - 1\right) \prec \begin{cases} \frac{e^{-i\alpha}(A-B)\cos\alpha z}{1+Bz}, & B \neq 0\\ e^{-i\alpha}A\cos\alpha z, & B = 0, \end{cases}$$

$$\Rightarrow e^{i\alpha}z\frac{\partial_q f(z)}{f(z)} = \begin{cases} \cos\alpha\frac{1+A\phi(z)}{1+B\phi(z)} + i\sin\alpha, & B \neq 0\\ \cos\alpha(1+A\phi(z)) + i\sin\alpha, & B \end{cases}$$

= 0,

= 0.

This shows that $f(z) \in S^*_{\alpha}(A, B, q)$.

Now we proceed to establish Coefficient bounds for the mth root transformation,

where

$$\sigma_1 = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B + ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - \frac{2([2]_q - 1)m}{[3]_q - 1} + m \right]$$

and

$$\sigma_2 = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - \frac{2([2]_q - 1)m}{[3]_q - 1} + m \right]$$

Proof. If $f(z) \in \Omega$ of $\frac{z\partial_q f(z)}{f(z)} - 1 = \begin{cases} \frac{e^{-i\alpha}(A-B)\cos\alpha\phi(z)}{1+B\phi(z)} & S* (A,B,q) \text{ then there is an analytic the form (8) such that} \\ e^{-i\alpha}A\cos\alpha\phi(z), & \text{, if } B = 0, \\ \text{ if } B = 0. \end{cases}$

Further,

$$\frac{e^{-i\alpha}(A-B)\cos\alpha\phi(z)}{1+B\phi(z)} = \frac{e^{-i\alpha}(A-B)\cos\alpha[\phi_1 z + \phi_2 z^2 + ...]}{1+B[\phi_1(z) + \phi_2 z^2 + ...]}$$
(15)
$$\frac{e^{-i\alpha}(A-B)\cos\alpha\phi(z)}{1+B\phi(z)}$$
$$= e^{-i\alpha}(A-B)\cos\alpha[\phi_1 z + (\phi_2 - B\phi_1^2)z^2 + ...].$$

$$\left(\frac{z_1\partial_q f(z_1)}{f(z_1)} - 1\right) = \begin{cases} \frac{(A-B)\cos\alpha e^{-i\alpha}L\phi(z_1)}{1+B\phi(z_1)} = f_1(\phi(z_1)) \in f_1(E), & B \neq 0\\ A\cos\alpha e^{-i\alpha}L\phi(z_1) = f_2(\phi(z_1)) \notin f_2(E), & B = 0, \end{cases}$$

We have

$$\frac{z\partial_q f(z)}{f(z)} - 1 = e^{-i\alpha}(A - B)\cos\alpha[\phi_1 z + (\phi_2 - B\phi_1^2)z^2 + \dots]$$
⁽¹⁷⁾

so that

$$\left(\frac{z+[2]_q a_2 z^2+[3]_q a_3 z^3+\dots}{z+a_2 z^2+a_3 z^3+\dots}-1\right) = e^{-i\alpha} (A-B) \cos\alpha [\phi_1 z+(\phi_2 - B\phi_1^2) z^2+\dots]$$
(18)

From (20) and (21), we get

$$a_2 = \frac{e^{-i\alpha}(A-B)\cos\alpha.\phi_1}{[2]_q - 1}$$
(19)

$$a_3 = \frac{1}{[3]_q - 1} \left[e^{-i\alpha} (A - B) \cos \alpha (\phi_2 - B\phi_1^2) + \frac{1}{[2]_q - 1} e^{-i2\alpha} (A - B)^2 \cos^2 \alpha . \phi_1^2 \right]$$

(16)

For function f given by (1) simple computation yields

$$[f(z^m)]^{\frac{1}{m}} = z + \frac{1}{m}a_2 z^{m+1} + \left(\frac{1}{m}a_3 - \frac{1}{2}\frac{m-1}{m^2}a_2^2\right)z^{2m+1} + \dots$$
(21)

The equations (5) and (24) yields

$$c_{m+1} = \frac{1}{m}a_2$$
(22)

$$c_{2m+1} = \frac{1}{m}a_3 - \frac{1}{2}\frac{m-1}{m^2}a_2^2.$$
(23)

by using (22) and (23) in (25) and (26), it follows

$$c_{m+1} = \frac{1}{[2]_q - 1} e^{-i\alpha} (A - B) \cos \alpha \phi_1$$

$$c_{2m+1} = \frac{1}{2m} e^{-i\alpha} (A - B) \cos \alpha \left[\frac{2}{[3]_q - 1} \left(\phi_2 - B\phi_1^2 + \frac{1}{([2]_q - 1)} e^{-i\alpha} (A - B) \cos \alpha \phi_1^2 \right) \right]$$

$$-\frac{1}{2} \left(\frac{m - 1}{m^2} \right) \frac{1}{([2]_q - 1)^2} e^{-i2\alpha} (A - B)^2 \cos^2 \alpha \phi_1^2$$

$$= \frac{1}{2m}e^{-i\alpha}(A-B)\cos\alpha\left\{\frac{2}{[3]_q-1}\phi_2 - \frac{(2B)}{([3]_q-1)}\phi_1^2 + \left(\frac{2}{([3]_q-1)([2]_q-1)} - \frac{1}{([2]_q-1)^2}\right)e^{-i\alpha}(A-B)\cos\alpha\phi_1^2 + \frac{1}{([2]_q-1)^2m}e^{-i\alpha}(A-B)\cos\alpha\phi_1^2\right\}$$

and hence

$$c_{2m+1} - \mu c_{m+1}^2 = \frac{1}{2m} e^{-i\alpha} (A - B) \cos \alpha \left\{ \frac{2}{[3]_q - 1} \phi_2 - \left[\frac{(2B)}{([3]_q - 1)} - N \cos \alpha \right] \phi_1^2 \right\},$$

where $N = \frac{2}{([3]_q - 1)([2]_q - 1)} - \frac{1}{([2]_q - 1)^2} + \frac{1 - 2\mu}{([2]_q - 1)^2 m} e^{-i\alpha} (A - B).$

The first result is established by an application of Lemma 2.1. If

$$\frac{2}{[3]_q - 1} B - \left(\frac{2}{([3]_q - 1)([2]_q - 1)} - \frac{1}{([2]_q - 1)^2} + \frac{1 - 2\mu}{([2]_q - 1)^2 m}\right) e^{-i\alpha} (A - B) \cos \alpha \le -1$$

then

$$\mu \leq -\frac{1}{2} \left[\frac{([2]_q - 1)^2 m (2B + ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - \frac{2([2]_q - 1)m}{[3]_q - 1} + m - 1 \right], \ (\mu \leq \sigma_1)$$

by Lemma 2.1
$$q = -\frac{1}{2} \left[\frac{-\frac{B(A - B)}{([2]_q - 1)} + \left[\frac{A - B}{([2]_q - 1)([2]_q - 1)} - \frac{A - B}{([2]_q - 1)}\right] + \frac{(A - B)^2}{2^{2}([2]_q - 1)^2} (1 - 2\mu), \ \text{if } B \neq 0$$

$$\left|c_{2m+1} - \mu c_{m+1}^{2}\right| \leq \begin{cases} -\frac{B(A-B)}{([3]_{q}-1)m} + \left[\frac{A-B}{([3]_{q}-1)([2]_{q}-1)m} - \frac{A-B}{(2[2]_{q}-1)m}\right] + \frac{(A-B)^{2}}{2m^{2}([2]_{q}-1)^{2}}(1-2\mu), & \text{if } B \neq 0\\ \frac{A^{2}}{m([2]_{q}-1)}\left[\frac{1}{[3]_{q}-1} - \frac{1}{2}\right] + \frac{A^{2}}{2m^{2}([2]_{q}-1)^{2}}(1-2\mu), & \text{if } B = 0 \end{cases}$$

$$\begin{split} & \text{If} \\ -1 \leq \frac{2}{[3]_q - 1} B - \left(\frac{2}{([3]_q - 1)([2]_q - 1)} - \frac{1}{([2]_q - 1)^2} + \frac{1 - 2\mu}{2([2]_q - 1)^2 m}\right) e^{-i\alpha} (A - B) \cos \alpha \leq 1 \\ & \text{then} \\ & \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B + ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \leq \mu \leq \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \leq \mu \leq \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - F \right] \\ & = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B -$$

243

where $F = \frac{2([2]_q - 1)m}{[3]_q - 1} + m$, and Lemma 2.1 yields

$$c_{2m+1} - \mu c_{m+1}^2 | \le \begin{cases} \frac{(A-B)}{([3]_q-1)m}, & \text{if } B \neq 0\\ \frac{A}{([3]_q-1)m}, & \text{if } B = 0. \end{cases}$$

$$\frac{\mathrm{If}}{[3]_q - 1} B - \left[\frac{2}{([3]_q - 1)([2]_q - 1)} - \frac{1}{([2]_q - 1)^2} + \frac{1 - 2\mu}{([2]_q - 1)^2m}\right) e^{-i\alpha}(A - B)\cos\alpha \ge 1$$

then.

$$\begin{split} \mu &\geq \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2 m (2B - ([3]_q - 1)) e^{i\alpha}}{([3]_q - 1)(A - B) \cos \alpha} - \frac{2([2]_q - 1)m}{[3]_q - 1} + m \right], \\ (\mu &\geq \sigma_2) \end{split} \\ |c_{2m+1} - \mu c_{m+1}^2| &= \begin{cases} \frac{B(A - B)}{([3]_q - 1)(A - B) \cos \alpha} - \frac{(A - B)^2}{([3]_q - 1)([A - B) \cos \alpha]} + \frac{(A - B)^2}{2m([2]_q - 1)} - \frac{(A - B)^2(1 - 2\mu)}{2m^2([2]_q - 1)^2}, & \text{if } B \neq \mathbf{n} \\ \frac{-A^2}{([2]_q - 1)m} \left(\frac{1}{[3]_q - 1} - \frac{1}{2}\right) - \frac{A^2(1 - 2\mu)}{2m^2([2]_q - 1)}, & \text{if } B = \mathbf{n} \end{cases}$$

t follows from Lemma 2.1 that

The second result follow by an application of Lemma 2.2

$$\leq \begin{cases} \frac{(A-B)}{([3]_q-1)m} \max\left\{1, \left|\frac{(2B)}{([3]_q-1)} - \left(\frac{2}{([3]_q-1)([2]_q-1)} - T\right)e^{-i\alpha}(A-B)\cos\alpha\right|\right\}, & \text{if B } 6=0, \\ \frac{A}{([3]_q-1)m} \max\left\{1, \left|\left(\frac{2}{([3]_q-1)([2]_q-1)} - T\right)e^{-i\alpha}A\cos\alpha\right|\right\}, & \text{if B } 6=0, \\ \end{bmatrix} \\ \text{where} \quad H = \left(\frac{2}{([3]_q-1)([2]_q-1)} - \frac{1}{([2]_q-1)^2}\right)e^{-i\alpha}(A-B)\cos\alpha\phi_1^2 + \frac{1-2\mu}{m([2]_q-1)^2}e^{-i\alpha}(A-B)\cos\alpha\phi_1^2 \\ \text{and} T = \frac{1}{([2]_q-1)^2} + \frac{1-2\mu}{([2]_q-1)^2m}. \end{cases}$$

By putting m = 1, A = 1, B = -1, and $\alpha = 0$ in the Theorem 2.2, we get the following:

$$\begin{aligned} \text{Theorem 2.3. If } \mathbf{f} \in \mathbf{A} \text{ satisfies } \frac{z\partial_q f(z)}{f(z)} \prec \frac{1+z}{1-z} \text{. Then} \\ |a_3 - \mu a_2^2| &\leq \begin{cases} \frac{2}{[3]_q - 1} + \frac{4}{([3]_q - 1)([2]_q - 1)} - \frac{2}{([2]_q - 1)^2} + \frac{2}{([2]_q - 1)^2} - \frac{4\mu}{([2]_q - 1)^2}, & \text{if } \mu \leq \rho, \\ \frac{2}{[3]_q - 1}, & \rho \leq \mu \leq \delta \end{cases} \\ & \mathbf{L} - \left[\frac{2}{[3]_q - 1} + \frac{4}{([3]_q - 1)([2]_q - 1)} - \frac{2}{([2]_q - 1)^2} + \frac{2}{([2]_q - 1)^2} - \frac{4\mu}{([2]_q - 1)^2} \right], & \mu \geq \delta, \end{cases} \\ & \mathbf{h} = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2(-2 + ([3]_q - 1)}{2([3]_q - 1)} - \frac{2[2]_q - 1}{[3]_q - 1} + 1 \right], \delta = \frac{1}{2} \left[1 - \frac{([2]_q - 1)^2(-2 - ([3]_q - 1)}{2([3]_q - 1)} - \frac{2[2]_q - 1}{[3]_q - 1} + 1 \right] \end{aligned}$$

As $q \rightarrow 1$ -in the above Theorem we get the following result proved by Annamalai[3]

Corollary 2.1. If $f \in A$ satisfies $\frac{zf'(z)}{f(z)} \prec \frac{1+z}{1-z}$. Then

$$|a_{3} - \mu a_{2}^{2}| \leq \begin{cases} \Box 3 - 4\mu & \text{if}^{\mu} \leq \frac{1}{2}, \\ 1 & \text{if}^{\frac{1}{2}} \leq \mu \leq 1, \end{cases}$$
(24)

$$\Box -(3-4\mu) \qquad \text{if } \mu \ge 1.$$

By putting m = 1, A = 1, B = 0, and $\alpha = 0$ in the Theorem 2.2, we get the following:

Theorem 2.4. If $f \in A$ satisfies $\frac{z\partial_q f(z)}{f(z)} \prec 1 + z$. Then $\int \frac{1}{([3]_q-1)([2]_q-1)} - \frac{1}{([2]_q-1)^2} + \frac{1-2\mu}{2([2]_q-1)^2}, \qquad \text{if } \mu \le \rho,$ $\rho \leq \mu \leq \delta$ $|a_3 - \mu a_2^2| \le \begin{cases} \frac{1}{[3]_q - 1}, \end{cases}$
$$\begin{split} \mathbf{L} &- \left[\frac{1}{([3]_q-1)([2]_q-1)} - \frac{1}{([2]_q-1)^2} + \frac{1-2\mu}{2([2]_q-1)^2} \right], \quad \mu \geq \delta, \\ \text{where} \\ \rho &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)} \right], \\ \delta &= \frac{1}{2} \left[2 - \frac{([2]_q-1)^2(-2+([3]_q-1))}{2([3]_q-1)}$$

As $q \rightarrow 1$ -in the above Theorem we get the following result proved by Annamalai[3]

Corollary 2.2. If $f \in A$ satisfies $\frac{zf'(z)}{f(z)} \prec \frac{1+z}{1-z}$. Then $|a_3 - \mu a_2^2| \le \begin{cases} \int_{\frac{1}{2}}^{\frac{1-2\mu}{2}} & \text{if } \mu \le 0, \\ \frac{1}{2} & \text{if } 0 \le \mu \le 1, (25) \end{cases} \begin{pmatrix} -\left(\frac{1-2\mu}{2}\right) & \text{if } \mu \ge 1. \end{cases}$

By putting m = 1, A =
$$\beta$$
, B = 0, and $\alpha = 0$, $0 \le \beta < 1$ in the Theorem 2.2, we get the following:
Theorem 2.5. If $f \in A$ satisfies $\frac{z\partial_q f(z)}{f(z)} \prec 1 + \beta z$. Then

$$\begin{aligned} |a_{3} - \mu a_{2}^{2}| &\leq \begin{cases} \frac{1}{[3]_{q} - 1}, & \rho \leq \mu \leq \delta \\ & \int \frac{\beta^{2}}{([3]_{q} - 1)([2]_{q} - 1)} - \frac{\beta^{2}}{([2]_{q} - 1)^{2}} + \frac{\beta^{2}(1 - 2\mu)}{2([2]_{q} - 1)^{2}}, & if \ \mu \leq \rho, \\ & \int -\left[\frac{\beta^{2}}{([3]_{q} - 1)([2]_{q} - 1)} - \frac{\beta^{2}}{([2]_{q} - 1)^{2}} + \frac{\beta^{2}(1 - 2\mu)}{2([2]_{q} - 1)^{2}}\right], \ \mu \geq \delta, \\ & \int -\left[\frac{\beta^{2}}{([3]_{q} - 1)([2]_{q} - 1)} - \frac{\beta^{2}}{([2]_{q} - 1)^{2}} + \frac{\beta^{2}(1 - 2\mu)}{2([2]_{q} - 1)^{2}}\right], \ \mu \geq \delta, \\ & \int \rho = \frac{1}{2}\left[2 - \frac{([2]_{q} - 1)^{2}([3]_{q} - 1)}{([3]_{q} - 1)\beta} - \frac{2([2]_{q} - 1)}{[3]_{q} - 1}\right], \delta = \frac{1}{2}\left[2 + \frac{([2]_{q} - 1)^{2}([3]_{q} - 1)}{([3]_{q} - 1)\beta} - \frac{2([2]_{q} - 1)}{[3]_{q} - 1}\right] \end{aligned}$$

the following result proved by Annamalai[3] Corollary 2.3. If f As $q \rightarrow 1$ -in the above Theorem we

$$\in$$
 A satisfies

$$|a_{3} - \mu a_{2}^{2}| \leq \begin{cases} \frac{\beta^{2}(1-2\mu)}{2} & \text{if}^{\mu} \leq \frac{\beta-1}{2\beta}, \\ 1 - \beta & \frac{\beta-1}{2\beta} \leq \mu \leq \frac{\beta+1}{2\beta}, \\ -\left(\frac{\beta^{2}(1-2\mu)}{2}\right) & \text{if}^{\beta-1} \leq \mu \leq \frac{\beta+1}{2\beta}, \\ 1, A = \beta, B = -\beta, \text{ and } \alpha = 0, 0 \leq \beta < 1 \text{ in the} \end{cases}$$

 $\frac{zf'(z)}{f(z)} \prec \frac{1+z}{1-z}$ Then

By putting m =Theorem 2.2, we get the following:

Theorem 2.6. If
$$\mathbf{f} \in \mathbf{A}$$
 satisfies $\frac{z\partial_q f(z)}{f(z)} \prec \frac{1+\beta z}{1-\beta z}$. Then

$$\begin{vmatrix} a_3 - \mu a_2^2 \end{vmatrix} \leq \begin{cases} \frac{2\beta^2}{([3]_q - 1)} + \frac{(2\beta)^2}{([2]_q - 1)([3]_q - 1)} - \frac{(2\beta)^2}{([2]_q - 1)([3]_q - 1)} + \frac{4\beta^2(1-2\mu)}{2([2]_q - 1)^2}, & \text{if } \mu \leq \rho, \\ \rho \leq \mu \leq \delta \end{cases}$$

$$\int_{\alpha} \left[-\left[\frac{2\beta^{2}}{([3]_{q}-1)} + \frac{(2\beta)^{2}}{([2]_{q}-1)([3]_{q}-1)} - \frac{(2\beta)^{2}}{([2]_{q}-1)([3]_{q}-1)} + \frac{4\beta^{2}(1-2\mu)}{2([2]_{q}-1)^{2}} \right], \quad \mu \ge \delta,$$
where
$$\rho = \frac{1}{2} \left[2 - \frac{([2]_{q}-1)^{2}(-2\beta+([3]_{q}-1))}{2([3]_{q}-1)\beta} - \frac{2([2]_{q}-1)}{[3]_{q}-1} \right], \quad \delta = \frac{1}{2} \left[2 + \frac{([2]_{q}-1)^{2}(2\beta+([3]_{q}-1))}{2([3]_{q}-1)\beta} - \frac{2([2]_{q}-1)}{[3]_{q}-1} \right].$$

If $q \rightarrow 1$ -in the above Theorem we get the following result proved by Annamalai[3]

Corollary 2.4. If $f \in A$ satisfies $\frac{zf'(z)}{f(z)} \prec \frac{1+z}{1-z}$. Then

III. CONCLUSION

In this paper we found Janowski α -q-spirallike with power senes of the form and its properties.
